

Solar Energy Supply Chain Manufacturing Specialist

JOB DESCRIPTION

The Clean Energy Manufacturing Center of the BlueGreen Alliance Foundation is seeking a dynamic and skilled individual to join its Minneapolis, MN team. The primary function of this position will be to develop a tool to assess opportunities for companies interested in entering the solar energy supply chain and also to help determine a company's capabilities/qualifications to enter this market.

The manufacturing specialist will also be expected to conduct workshops/seminars for manufacturers as well as advise individual companies concerning their potential role in the solar energy supply chain market. These activities take place nationally.

POSITION REQUIREMENTS

Candidates for this position are expected to have expertise in the following areas.

- An in-depth understanding of solar energy components, manufacturing processes and the associated requirements affecting their ultimate manufacturability.
- A developed familiarity with PV solar design and technology trends.
- An understanding of corporate supply chain ideals, practices and concepts within both the North American and global arenas.

SKILLS AND QUALIFICATIONS

This position requires an engineering background with previous involvement in the solar energy supply chain and knowledge of the major players in the industry.

- Familiarity with initiatives such as ISO, LEAN, six sigma, 5S.
- Previous experience with renewable energy technologies and utility grade electrical generation
- A broad understanding of renewable energy influences affecting the industry both today and in the future.
 - Strong verbal communication and presentation skills;
 - Ability to interact cooperatively and effectively with manufacturing company executives as well as public officials.
 - College degree, preferably in mechanical engineering.

SALARY

Commensurate with experience.

APPLICATION PROCEDURES

Please submit a letter of interest/resume to Lindan@bluegreenalliance.org by February 10th
