

Current Projects and Partnerships

- With support from the Solar Energy Industries Association, Solar Electric Power Association and collaboration from Cornell University, The Solar Foundation is currently authoring a highly-anticipated and potentially ground-breaking “National Solar Jobs Census” report. This report will be released at the Solar Power International 2010 conference in Los Angeles. To learn more about the Census or to sponsor the Solar Jobs Census Release Party event, [click here](#).
- Additionally, TSF has entered into a partnership with the International Council for Local Environmental Initiatives (ICLEI), International City/County Management Association (ICMA), Interstate Renewable Energy Council (IREC), Database of State Incentives for Renewable Energy (DSIRE), Meister Consulting Group (MCG), and Solar Electric Power Association (SEPA) on a five-year, multi-million dollar U.S. Department of Energy [Solar America Cities – Technical Outreach](#) grant to provide technical expertise to local governments that are interested in implementing solar programs and policies. This grant is modeled after the U.S. Department of Energy-Solar America Cities program and will bring best practices and “lessons learned” to local governments throughout the country.
